

Technical Skills:

Programming Languages: Python, SQL, HTML, CSS, Bash, Generative AI, Prompt Engineering, AIOps.

Tools: Datadog, Opsgenie, Grafana, OTRS, JIRA, Kubernetes, Terraform, Jenkins, New Relic, Git, PowerShell, TrendMicro, Imperva, Squid, Github Advanced Security Scan for Azure DevOps (GHASDO)

Operating Systems: Linux (Ubuntu, CentOS, RHEL, Kali), Windows, MacOS

Databases: Oracle SQL, MySQL, MongoDB, NoSQL, SQLite

Cloud Tools: AWS - EC2, VPC, ECS, Route53, S3, CloudWatch, RDS, IAM, Lambda, ECR, CloudTrail, Eventbridge rule

Azure – VM, Automation Accounts, Alert configuration, Resource Group, Function App, Cosmos DB, Load Balancers, Storage accounts, Virtual Network, Key Vault, App Services

Work Experience:

Senior Analyst - IT Applications | BrandSafway (Full-time)

May 2025 – Present

Key Responsibilities:

- Improved CI/CD reliability and deployment success by optimizing Azure DevOps pipelines, reducing release issues and improving deployment consistency across environments.
- Implemented GitHub Advanced Security (CodeQL & dependency scanning) across 100% of active repositories, enabling early vulnerability detection and strengthening SDLC security.
- Reduced alert noise by ~40% by fine-tuning monitoring rules and thresholds, improving signal-to-noise ratio and on-call efficiency.
- Built centralized monitoring dashboards for legacy and modern applications, improving system visibility and enabling proactive incident detection.
- Secured secrets across 12 applications by implementing Azure Key Vault and coordinating scheduled token rotations, preventing credential exposure incidents.

Senior Software Engineer – Systems | Mphasis Limited (Full-time) - 8 Months

Oct 2024 – May 2025

Client: Fidelity Investments

Key Responsibilities:

- Resolved day-to-day application issues and monitored internal tools like Calypso, Cashavail, and Tradehub to ensure business continuity.
- Designed and implemented solutions to move log data from multiple servers to a centralized hub, streamlining data accessibility and troubleshooting.
- Managed server configurations, file placements, and application-level patching, ensuring system reliability and compliance.
- Successfully handled high-priority Change Management, incidents, and service requests, meeting SLA targets and minimizing downtime.

DevOps Engineer 2 | Gain Credit, Chennai, India (Full-time) - 8 Months

Jan 2024 – Sep 2024

Key Responsibilities:

- Owned production SLOs/SLAs by building Datadog-based alerting, synthetic checks, and auto-healing workflows (Jenkins + Ansible), reducing MTTR and eliminating repeat incidents across critical services.
- Embedded DevSecOps controls into CI/CD pipelines by implementing secure secret handling, encrypted artifact workflows, and policy-driven validations for AWS, Docker, and ECS deployments.
- Led incident response and RCA execution for high-severity production issues, coordinating between application, cloud, and security teams, and converting findings into preventive automation and monitoring improvements.
- Defined and enforced infrastructure hardening standards (OS baselines, kernel patching, IAM least privilege, AMI hardening) across AWS EC2, ECS, and RDS environments to meet security and audit requirements.

Achievements:

- Awarded the Spot Award for demonstrating exceptional curiosity and execution in successfully completing the migration of over 150 CentOS servers to Ubuntu, ensuring a seamless transition with zero downtime.

Key Responsibilities:

- Reduced customer issue resolution time by 66% (24h → 8h) by designing and deploying a Retool-based internal platform, centralizing agent workflows and improving operational reliability.
- Enforced data security and retention compliance by leading database cleanup initiatives and implementing Data Retention Policies, reducing exposure of customer-sensitive financial data and supporting audit readiness.
- Eliminated manual log maintenance by automating log rotation and cleanup across EC2 servers, improving system stability and preventing disk-related production incidents.
- Cut operational toil by 25%+ by automating repetitive BizOps and support tasks using Jenkins jobs and scripts, allowing teams to focus on higher-value incident and reliability work.

Operations Engineer 1 | Gain Credit, Chennai, India (Full-time) – 1 Year**Jun-2021 – Jun-2022**

- Built deep operational expertise of complex business workflows, enabling faster triage of production issues and reducing misclassification between product gaps and true software defects escalated to the CIM team.
- Improved incident resolution accuracy by distinguishing functional issues from application bugs, ensuring correct routing, faster fixes, and reduced back-and-forth between support and engineering teams.
- Reduced operational toil by automating recurring admin, collection, and chargeback workflows using Bash scripting, increasing processing efficiency and freeing up engineering time for higher-impact work.
- Improved database stability and performance by identifying long running and blocking SQL queries, resolving lock contention issues, and optimizing query execution to prevent recurring production slowdowns.

Achievements:

- Received “Spirit in Value” Award for EXECUTION AND OWNERSHIP for my cross-functional performance in under Marketing team.
- Received “Spirit in Value” Award for CUSTOMER OBSESSION for my keen attention to detail for resolving customer queries.

Building Management System Operator | Bellfast management private limited, Hyderabad, India (Full-time) - 8 Months**Mar 2020 –Nov 2020****Client: Honeywell Building Technologies****Key Responsibilities:**

- Commissioned and stabilized mission-critical physical infrastructure systems (CCTV, fire alarms, PA systems, AHUs) across multiple TCS client sites, ensuring 24×7 availability, compliance readiness, and zero safety incidents during handover and operations.
- Led on-site troubleshooting and preventive checks for Honeywell security and safety systems, rapidly diagnosing faults, restoring services, and improving system reliability across geographically distributed locations.

Building Management System Operator | Prestige Technical Services, Inc., Hyderabad, India (Full-time) - 3 Months**Nov 2019 –Mar 2020****Client: Honeywell Building Technologies****Key Responsibilities:**

- Maintained high availability of mission-critical security and HVAC systems across multiple high-revenue TCS client sites by performing preventive maintenance and rapid first-level incident resolution, preventing service disruptions and safety escalations.
- Improved incident response effectiveness by coordinating directly with on-site stakeholders, diagnosing hardware and control-system failures, and restoring services within defined operational SLAs across distributed client locations.

EDUCATION:**Bachelor of Engineering in Mechanical and Production** | Sathyabama Institute of Science and Technology, Chennai, India**Jun 2014 – Apr 2019****Grade – 6.64/10****INTERSHIPS:****Development Intern** | Sennovate Inc, Chennai, India (Full-time) – 8 Months**Mar 2019 –Nov 2019**

Developed a user-friendly HTML website as an intern, utilizing Python frameworks like Django and PHP. Enabled efficient time logging for specific projects assigned by managers. Implemented performance monitoring reports to assess the system performance of a local virtual machine. Developed a comprehensive report based on the "Top" command in Ubuntu, providing valuable insights into system resource utilization.
